

PROCTER & GAMBLE MANUFACTURING COMPANY, Sacramento County

Procter & Gamble Manufacturing Company discharges co-mingled cooling water and stormwater into a City-owned lift station, which pumps it into a concrete lined channel that conveys it to Morrison Creek. On 16 March 2001, the Regional Board adopted Waste Discharge Requirements Order No. 5-01-064, NPDES No. CA0004316, prescribing waste discharge requirements for discharges from this facility. At the time of permit adoption, it was unknown whether the discharge could comply with receiving water limitations for temperature and dissolved oxygen. A provision in the permit required that a report be submitted a year after permit adoption indicating compliance within 18 months of adoption, or a time schedule to achieve compliance within the shortest practicable time. The Discharger provided a report with a time schedule to perform system modifications necessary to comply with the limitations by January 2008, but later submitted information that improvements would be complete by March 2006. This amendment proposes to extend the compliance date for receiving water temperature and dissolved oxygen from within 18 months of permit adoption to 1 March 2006 to allow the Discharger time to conduct studies, perform modifications, and initiate discharge to the sanitary sewer.
